

Prevalence of Health Problems Among Spouse Caregivers of Noninstitutionalized Frail Older Adults, 2002

Source: Johnson, Richard W., and Joshua M. Wiener. 2006. "A Profile of Frail Older Americans and Their Caregivers." Washington, DC: Urban Institute.

Note: Estimates are based on a sample of 684 caregivers and helpers who are the spouses of frail adults age 65 and older living in the community. The analysis classifies respondents as having poor mental health if they report four or more depressive symptoms on an eight-point scale.
