IMPACT 5000: Serving Children in Public Housing in DC
A Unique Partnership & Innovative Design

- DCHA commissioned in order to get a picture of its families with children
- Partnership between Urban, DCHA, Howard University, and the University of the District of Columbia
- DCHA residents served as “field locators”, assisting with outreach, communications, and logistics
- Teams from Howard and UDC conducted surveys using tablets
Key Findings from Needs Assessment

- Parents are an important asset: they are engaged with their children and most say their children are doing well overall.
- But families are coping with economic uncertainty and tough community challenges.
- Because of these challenges, a substantial proportion of parents report that they and their children are struggling.
DCHA parents are a strong asset

- The majority of parents of young children says that they regularly read books, tell stories, sing songs, and play outside with them.
- More than half report that their young children (6-11) are doing well overall (exhibit 5 out of 6 positive behaviors).
- Nearly the same proportion report that their teens (12-17) are also doing well.
Families face steep economic challenges

- Only one-in-three adults is working outside the home
- But most have finished high school
- Majority rely on public assistance (80% of households use SNAP, 37% use SSI: 54% use TANF/PA)
Families are struggling to make ends meet

- More than a third report experiencing food insecurity
- About the same number say they have struggled to pay rent on time in the past year
- One in five say they have been threatened with eviction
DCHA families are raising their children in dangerous conditions

Share of residents reporting... as a big problem

- Shootings and violence
- People using drugs
- People selling drugs
- Police not coming when called

Percent of respondents reporting as a big problem
A substantial proportion of both adults and children report poor health

- Parents have serious physical and mental health challenges
  - More than 1 in 3 report fair/poor health, asthma, worry/anxiety
  - 1 in 5 scored clinically depressed
- Some parents report their children also have chronic health problems
  - 1 in 3 report their child has asthma
  - 20 percent say their child is overweight
  - 14 percent say their child has a chronic condition
Youth are struggling in school

- Parents contacted by teachers about behavioral problems at school
- Suspended, excluded or expelled from school
- Repeated a grade

Percent of respondents 13-17 reporting
Over half of parents report children have behavior problems, indicating poor mental health.

- Children 6-11
- Children 12-17
1 in 4 parents say they have been contacted by child protective services

Parent reporting they have been...

- Contacted by CPS: 25%
- Contacted more than once: 15%
- Contacted in the past 2 years: 10%
- Case monitored by CPS: 10%
- Children placed in foster care: 5%
Informing IMPACT 5000

- Findings highlight the need to provide supports to DCHA families to promote stability
- Points to the types of partners DCHA will need to ensure its children succeed in school and access opportunity
