

Insurance Coverage among Women of Reproductive Age in South Carolina

The Affordable Care Act established several provisions aimed at reducing the uninsurance rate, and the number of uninsured women of reproductive age (15–44) in the United States fell from 12.7 million in 2013 to 7.5 million in 2017.

In South Carolina, which did not expand Medicaid under the Affordable Care Act, the uninsurance rate fell from 23.1 percent in 2013 to 15.8 percent in 2017. Despite these gains, approximately 152,000 South Carolina women of reproductive age remained uninsured in 2017.

Uninsurance Rate among Subgroups of Women in South Carolina and the US, 2017

Uninsured women are vulnerable to well-documented access, affordability, and health problems associated with lacking insurance coverage, including potentially limited access to family planning and other reproductive health services.

- Women of reproductive age in South Carolina had a higher uninsurance rate (15.8 percent) than similar women nationwide (11.7 percent) in 2017 (figure 1).
- Within South Carolina, women ages 19 to 25, Hispanic women, single mothers, women with incomes at or below 138 percent of the FPL, unemployed women, and women not in the labor force had higher uninsurance rates than the state average for all women of reproductive age in 2017.
- Reducing the uninsurance rate among women of reproductive age in South Carolina may require expanding access to Medicaid or other highly subsidized insurance, as well as targeted outreach and enrollment efforts to subgroups of already eligible women with the highest uninsurance rates.

Notes: FPL is federal poverty level. White, black, and other/multiple race are non-Hispanic. Differences reported in text are significant at $p < 0.05$.

FIGURE 2

Potential Eligibility for Financial Assistance Obtaining Coverage among Uninsured Women of Reproductive Age in South Carolina, 2017

Source: Urban Institute analysis of 2017 American Community Survey.

Note: CHIP is the Children's Health Insurance Program. Some uninsured women in all categories may be eligible for or enrolled in a Medicaid plan that covers family planning services only.

Some women may remain uninsured because they lack an affordable coverage option, but others may not enroll in an affordable Medicaid, Children's Health Insurance Program, or Marketplace plan because of a lack of awareness of their eligibility, administrative burdens, or concerns about enrolling in a public program.

Among approximately 152,000 uninsured women of reproductive age in South Carolina in 2017 (figure 2),

- about 12.6 percent were likely eligible for comprehensive Medicaid or Children's Health Insurance Program coverage based on their income;
- another 39.8 percent were likely eligible for assistance with premiums for Marketplace coverage based on their income, including 10.4 percent with incomes between 100 and 138 percent of the FPL;
- about 30.4 percent had incomes below the FPL and were likely eligible for coverage for family planning services only; and
- about 17.2 percent were likely ineligible for assistance obtaining comprehensive health insurance, including noncitizens (13.2 percent), and women with incomes above 400 percent of the FPL (4.0 percent).

Looking Ahead

Expanding Medicaid in South Carolina could benefit approximately 40.9 percent of uninsured South Carolina women of reproductive age, including currently ineligible citizens with incomes below the FPL (30.4 percent) and those with incomes between 100 and 138 percent of the FPL (10.4 percent) for whom Medicaid may be more affordable than Marketplace coverage. Outreach and enrollment efforts targeted at subgroups of women with high uninsurance rates and those already eligible for assistance could help reduce the uninsurance rate in South Carolina, though higher subsidies may be required to help address affordability barriers. In addition to continuing to monitor the uninsurance rate, it will be critical to track women's ability to access the general and reproductive health services they need. This will include monitoring the availability and capacity of providers that disproportionately serve low-income and uninsured women, such as community health centers and Title X clinics.
