

In Search of COVID-19 Related Child Care Surveys and Data Analyses

Help us find COVID-19 related surveys and data analyses that include child care providers, parents, and essential workers. We want to create a list that will help Child Care and Development Fund (CCDF) Lead Agencies and their research partners assess the needs of child care providers and families during the COVID-19 pandemic and recovery.

We invite you to share your survey instruments, reports, findings, analyses, or other resources related to COVID-19 and child care, including those that:

- Assess the impact of COVID-19 on child care providers and the child care workforce;
- Describe the child care needs of parents and essential workers;
- Track the availability of child care during different stages of the pandemic and recovery.

We are not collecting information about COVID-19 policy responses since these are available in other places. We are interested in surveys that are in the field (as well as reports summarizing survey findings and data analyses).

We are compiling a searchable list of publicly available materials that will be available on Urban's website. Please include URL information or an alternate way for people to access your material (e.g., provide an email contact for requests).

This work is being done by the Center for Supporting CCDBG Implementation Research, a project funded by the Office of Planning, Research, and Evaluation, Administration for Children and Families, U.S. Department of Health and Human Services. Please send all materials, along with your contact information, via email to COVIDbibliography@urban.org.
