ABOUT THE CHARTBOOK

The Housing Finance Policy Center’s (HFPC) mission is to produce analyses and ideas that promote sound public policy, efficient markets, and access to economic opportunity in the area of housing finance. At A Glance, a monthly chartbook and data source for policymakers, academics, journalists, and others interested in the government’s role in mortgage markets, is at the heart of this mission.

We welcome feedback from our readers on how we can make At A Glance a more useful publication. Please email any comments or questions to ataglance@urban.org.

To receive regular updates from the Housing Finance Policy Center, please visit here to sign up for our bi-weekly newsletter.

While the Single-family Market Continues to Heal, the Multifamily Market Shows Emerging Signs of Trouble

Since the aftermath of the pandemic recession, serious delinquency rates on 1-4 family GSE mortgages continue to fall, sitting at historically low levels. Serious delinquency rates on GSE multifamily loans also remain low, but they are rising. The higher multifamily serious delinquency rates correspond with a challenging landscape in the multifamily market. Amid the continued prospect of interest rates remaining “higher for longer”, these risks could have important implications for the GSEs given their growing role in debt financing existing multifamily properties.

Apartment Conditions Remain Challenging

- Property Value Index
- Net Operating Income (Rent) Index
- MF Investment Index
- Mortgage Rate (Right axis)

Approximately 87 percent of occupied multifamily units are renter-occupied. But according to the Apartment Investment Market Index (AIMI), produced by Freddie Mac, the multifamily investment environment has weakened nationwide. This index measures what investors are paying per dollar of net operating income, taking into account both interest rates and property values. As illustrated by the AIMI, the general weakness in the multifamily market has coincided with the upward trajectory of interest rates; this decreases the AIMI’s value because it increases debt service payments. Between the third quarter of 2021 and the second quarter of 2023, multifamily mortgage rates, compiled from the American Council on Life Insurers, rose from 2.8 percent to 5.5 percent. Over this same period, the AIMI has fallen by 21.2 percent to an index measure of 108.6.

The lower AIMI, reflecting higher mortgage rates, is partly attenuated by higher net operating income (NOI) and by falling property values. Higher net operating income will increase the AIMI due to the greater rental income investors are receiving on the property while falling property values can boost the AIMI because it reduces the cost of investing. Over this same two-year period, the NOI index, largely reflecting rents, increased by 11.2 percent to an index value of 216.6. However, the index has stagnated over the past three quarters. And while the property value index is 2.5 percent higher over the entire eight-quarter period, it began to decline in the second quarter of 2022.

Supply and Demand Conditions on Multifamily Lending by Banks

- Net share of banks
- Tightening Conditions (net)
- Loan Demand (net)

While falling property values may reduce costs for new investors, they may also lower the equity of current property owners. And the impact of lower property values is amplified for mortgaged properties. Amid higher mortgage rates, falling property values and stagnating NOI, the Mortgage Bankers’ Association reports in its Commercial/Multifamily Quarterly Databook covering the second quarter of 2023 that delinquency rates on multifamily loans have been rising. This affirms the rising trend in serious delinquency rates among GSE multifamily loans and stands in contrast to the declining trend in GSE serious delinquency rates on 1-4 family loans (see page 33 of this chartbook).

Amid worsening multifamily conditions, multifamily debt financing activity appears to be stalling. Lending standards on multifamily loans reported by banks through the Senior Loan Officer Opinion Survey are tightening significantly. At the same time demand for multifamily loans is declining.

The multifamily market may continue to struggle in the near term. In 2023, new multifamily unit completions are likely to be stronger while vacancy rates among 5+ unit multifamily rents are higher. In fact, multifamily completions have been higher in 2020, 2021, 2022 and 2023 than any year since the late 1980s. This suggests that property values as well as rents could continue to soften. The Housing Finance Policy Center will continue to track these developments and assess their impact on the GSEs, the mortgage lending landscape and the broader financial system.

Inside this Issue

- For the first time in series history (since 2004), Serious delinquency rates on Fannie Mae single-family loans equals the rate on multifamily loans (page 33).  
- The Ginnie Mae share of agency issuance remains high by historical standards at 37.7 percent (page 35).
In the second quarter of 2023, the total value of the housing market owned by households increased by 8.1 percent to $44.5 trillion, a series high and driven by a 10.4 percent increase in households’ housing equity to $31.7 trillion. Outstanding mortgage debt owed by households rose by 2.6 percent over the quarter to $12.9 trillion. Despite a small decline over the fourth quarter of 2022 and first quarter of 2023, the total housing market value owned by households is 84.4 percent above its fourth quarter of 2006 peak. The strong growth in market value of homes owned by households largely reflects households’ housing equity, which more than doubled over this time period, rising by 123.0 percent. Outstanding mortgage debt owed by households expanded by 29.3 percent during the same time. In the third quarter of 2023, agency MBS accounted for 65.1 percent ($9.0 trillion) of total mortgage debt outstanding while private-label securities made up 3.1 percent (0.43 trillion) and home equity loans made up 3.6 percent (0.49 trillion). Unsecuritized first liens, both Bank Portfolio and Other, comprise the remaining 28.2 percent ($3.9 trillion) with Banks making up 18.9 percent ($2.6 trillion), and Other accounting for 9.4 percent ($1.29 trillion). Of Other, credit unions account for 4.2 percent ($0.57 trillion), and other non-depositories accounted for 5.2 percent ($0.72 trillion) of the total (not shown).

Note: Single family includes 1-4 family mortgages.

Notes: Unsecuritized First Liens (Other) includes mortgages not held on bank balance sheets.
The three largest holders of the $8.9 trillion in outstanding agency MBS are commercial banks ($2.6 trillion), the Federal Reserve ($2.5 trillion) and foreign investors ($1.3 trillion). The foreign investor holdings includes both sovereign as well as private holdings. Commercial banks and the Federal Reserve have both had noticeable reductions in their holdings over the past year. From Q2 2022 to Q2 2023 commercial banks holdings are down by 15.1 percent while Federal Reserve holdings are down by 6.5 percent. By the end of Q3 2023, outstanding securities in the agency market totaled $8.9 trillion according to loan-level data, 40.6 percent ($3.6 trillion) of which was Fannie Mae, 33.2 percent ($2.9 trillion) Freddie Mac, and 26.2 percent ($2.4 trillion) Ginnie Mae. After closing the gap in securitized volume with Freddie Mac in the aftermath of the Great Recession, Ginnie securitized volumes have lagged particularly over the 2020-2022 period; the gap has begun to close again in 2023.

**Sources:** eMBS and Urban Institute.
Amid rising interest rates, mortgage origination volume totaled $385 billion in the third quarter of 2023, versus $505 billion for Q3 2022. The decline in originations largely reflects fewer refinance loans. The GSE share was lower in Q3 2023 at 45.1 percent, compared to 49.7 percent in Q3 2022. And portfolio originations made up 26.1 percent of total volume in Q3 2023, down slightly from 26.4 percent in Q3 2022. However, the PLS share was 2.5 percent in Q3 2023, up from 2.3 percent in Q3 2022 and the FHA/VA share in Q3 2023 stood at 26.4 percent, up from 21.6 percent in Q3 2022. However, while the shares of PLS and FHA/VA originations rose year-over-year, origination volume in each of these segments fell over the same period.

After peaking at 4.87 percent in November 2018, mortgage rates began to decline, falling to 2.68 percent in December 2020. Amid falling mortgage rates, the share of agency loans considered refinancable rose from 6.8 percent in October 2018 to 87.4 percent in December 2020. Lower mortgage rates contributed to a burst in refinancings over 2020, 2021 and the first four months of 2022. The share of agency mortgages with a rate less than 3.5 percent expanded significantly, from 11.0 percent in December 2019 to 54.9 percent in April 2022. As mortgage rates rose over 2022, and in September 2023, reached their highest level in over 20 years, the share of agency mortgages considered refinancable has plummeted to 0.05 percent in October 2023. Higher mortgage rates helped reduce both refinancability, with many current borrowers having already refinanced into lower rates, and homebuyer affordability. Reduced affordability largely reflects higher mortgage payments and low housing inventory as current homeowners are disincentivized to sell and give up their low-rate mortgages. Amid higher rates, the share of outstanding mortgage volume with a rate of 3.5 percent or less has declined by only 5.9 percentage points from a high of 54.9 percent in April 2022 to 49.0 percent in September 2023.

**Refinancable Share of Agency Loans**

OVERVIEW

PRODUCT COMPOSITION AND REFINANCE SHARE

The adjustable-rate share of weekly mortgage applications varied widely in the 1990s and the early to mid-2000s, ranging from a low of 5 percent to a high of over 35 percent. From 2009 to early 2022, the ARM share remained very low, generally between 5 to 8 percent, as ultra-low rates persisted, and product risk was wrung out of the market following the housing bust. However, with rates rising substantially in 2022 and affordability worsening, the ARM share increased from 3.1 percent in the week ending January 7, 2022, to 12.8 percent as of the week ending October 14, 2022. After subsiding to 5.9 percent by July 21, 2023, the ARM share has begun to rise again reaching 8.8 percent as of November 10, 2023.

Adjustable-Rate Mortgage Share of Applications

Note: Includes purchase and refinance applications. Data updated through November 10, 2023.

Percent Refi at Issuance

Despite some monthly variation, from late 2018-though March 2021 the percent refi at issuance (refi share) generally increased for both the GSEs and for Ginnie Mae as interest rates dropped. Refinance originations reflect mortgage rates from 6-8 weeks earlier. Since April 2021, and in reaction to higher interest rates, the refi share has declined significantly. In October 2023, the Fannie Mae reached a new record low at 12.0 percent. The Freddie Mac refi share decreased to 11.0 percent and the Ginnie Mae share was 16.0 percent. The refi share across the GSEs has declined much more than Ginnie Mae’s as rates increased in 2022 and 2023. This has led to a rare reversal, where the Ginnie Mae refi share now exceeding that of the GSEs.

Sources: eMBS and Urban Institute.
Note: Based on at-issuance balance. Figure based on data from October 2023.
When mortgage rates are low, the share of cash-out refinances tends to be relatively smaller, as rate/term refinancing allows borrowers to save money by taking advantage of lower rates. But when rates are high, the cash-out refinance share is higher since the rate reduction incentive is gone and the only reason to refinance is to take out equity. The cash-out share of refinances generally declined in 2020, reaching 25 percent in September 2020 due to increased rate refinances amidst historically low rates. With rates rising dramatically and the bulk of rate-refinance activity behind us, the cash-out share increased to 84.8 percent as of January 2023 and is now trending between 70 and 80 percent. The cash-out share of total refinances remains elevated, but the absolute volume of cash-out refinances is low. However, the cash-out refi share of total originations for Fannie Mae, Freddie Mac, and VA lags that of FHA. While FHA may not be the optimal vehicle for home equity extraction, it may be the only way for lower credit borrowers to extract cash from their homes.

**Cash-out Share of Conventional Refinances**

Sources: Freddie Mac, eMBS and Urban Institute.

Note: The cash-out share for conventional market is calculated using Freddie Mac’s quarterly refinance statistics from 1995 to 2013. Post 2013 it is calculated monthly using eMBS. Data as of October 2023.

**Cash-out Refi Share of All Originations**

Sources: eMBS and Urban Institute

Note: Data as of September 2023. Fannie Mae started reporting cash-out volume in 2018.
The nonbank share for agency originations has been rising steadily since 2013, standing at 81 percent in October 2023. The Ginnie Mae nonbank share has been consistently higher than the GSEs, standing at 92 percent in October 2023. Fannie and Freddie had nonbank shares of 76 and 71 percent, respectively, in October 2023. Overall, nonbanks accounted for a larger share of refis than purchase loans. However, this reflected the greater nonbank share across Ginnie Mae refi loans. The nonbank purchase share was higher among both Fannie and Freddie purchase loans relative to refi loans in October 2023.
Since 2008, the agency and non-agency shares of residential MBS issuance have been oscillating within range. The non-agency share of mortgage securitizations increased gradually from 1.2 percent in 2012 to 7.4 percent in 2018. In 2020, the non-agency share dropped to 2.41 percent, reflecting increased agency refinances and less non-agency production due to COVID-19. The non-agency share more than doubled to 5.2 percent by July 2023. In October, it declined just slightly to 5.1 percent. In dollar terms, non-agency issuance reached $16.1 billion in Q3 2023, a decrease relative to the $20.8 billion in Q3 2022 and $45.8 billion in Q3 2021. Non-agency securitization totaled $6.1 billion in October 2023, a significant increase from July 2023, when it stood at $3.5 billion.

Sources: Inside Mortgage Finance and Urban Institute.
Note: Based on data from October 2023. Monthly non-agency volume is subject to revision.
The Urban Institute’s Housing Credit Availability Index (HCAI) assesses lenders’ tolerance for both borrower risk and product risk, calculating the share of owner-occupied purchase loans that are likely to go 90+ days delinquent over the life of the loan. The HCAI stood at 5.0 percent in Q2 2023, up from 4.8 percent in Q4 2022 and from 4.7 percent in Q2 2022. The loosening from Q1 2022 to Q1 2023 reflects an overall increase in default risk taken, led by a 15 percent increase among portfolio and private label securities, and a 4 percent increase among the GSEs. There was tightening in the government channel, with a nearly six percent decline in default risk taken year-over-year. Note that we updated the methodology as of Q2 2020, see new methodology here. More information about the HCAI is available here.

### All Channels

**Predicted default rate**

**Total default risk**

**Product risk**

**Borrower risk**

### GSE Channel

The trend toward greater credit availability in the GSE channel began in Q2 2011. From Q2 2011 to Q1 2019, the total risk taken by the GSE channel more than doubled, from 1.4 percent to 3.1 percent. This is still very modest by pre-crisis standards. However, accelerated tightening throughout 2020 induced by market conditions due to COVID-19 drove down credit risk to 2.5 percent in Q4 2020. The increase in Q1 2021, to 2.58 percent, marked the first expansion of credit availability in the GSE channel since Q1 2019. In Q2 2023, credit availability stood at 2.54 percent, slightly down from 2.55 percent in Q1 2023 but up slightly from 2.53 percent in Q2 2022.

**Predicted default rate**

**Total default risk**

**Product risk**

**Borrower risk**

Sources: eMBS, CoreLogic, HMDA, IMF, and Urban Institute.

Note: Default is defined as 90 days or more delinquent at any point. Last updated October 2023.
Government Channel

The total default risk the government loan channel is willing to take bottomed out at 9.6 percent in Q3 2013. It fluctuated in a narrow range at or above that number for three years. In the eleven quarters from Q4 2016 to Q1 2019, the risk in the government channel increased from 9.9 to 12.1 percent but has since receded. After declining to 10.4 percent in Q3 of 2020, the government channel had begun to expand risk as the government channel HCAI rose to 11.3 by Q1 2022, before dropping to 11.0 percent in Q1 2023, and further to 10.4 percent in Q2 2023; far below the pre-bubble level of 19 to 23 percent.

Portfolio and Private Label Securities Channels

The portfolio and private-label securities (PP) channel took on more product risk than the government and GSE channels during the bubble. After the crisis, the channel’s product and borrower risks dropped sharply. The numbers have stabilized since 2013, with product risk well below 5.0 percent and total risk largely in the range of 2.3-3.0 percent. In the second quarter of 2023, PP risk was measured at 3.0 percent, up substantially from 2.6 percent a year ago. Overall, risk in the PP channel is a shadow of the default risk taken prior to the Great Financial Crisis. Overall, risk in the PP channel is a shadow of the default risk taken prior to the Great Financial Crisis.

Sources: eMBS, CoreLogic, HMDA, IMF, and Urban Institute.
Note: Default is defined as 90 days or more delinquent at any point. Last updated October 2023.
Over 2023, credit standards have tightened, mostly across the FICO dimension, but remain broadly easier relative to the levels that prevailed in December 2021, just prior to the significant rise in interest rates. Median FICO score at origination in September 2023 was 743, just under its 745 level in December 2021. Median DTI was 42 percent, which remains above its December 2021 rate of 39 percent. Median LTV sits at 94 percent in September, above its December 2021 level of 90 percent.

Sources: Black Knight, eMBS, HMDA, SIFMA, CoreLogic and Urban Institute.
Note: Includes owner-occupied purchase loans only. DTI data prior to April 2018 is from CoreLogic; after that date, it is from Black Knight. A back-update to the Black Knight historical series was made in September 2021 for data starting from 2001 onward. Data as of September 2023.
FICO scores for banks and nonbanks in both GSE and Ginnie Mae segments increased during the Q1 2019 to Q1 2021 period due to increased refi activity in response to lower rates; as refi activity tapered, FICO scores fell. Borrowers of refi loans typically have higher FICO scores than borrowers of purchase loans which boosted median scores amid the most recent refi wave and reduced scores as rates rose. There has also been a sharp cut-back in FHA lending by banks post-2008. As pointed out on page 12, banks now comprise only about 8 percent of Ginnie Mae originations. But after falling in 2021 and most of 2022, median FICO scores are higher over 2023, rising from 726 to 740, despite a sharp contraction in refinance activity. This likely reflects the fact that with affordability stretched due to the increases in interest rates and home prices, qualification often requires higher FICO scores to compensate. The gap between agency bank and nonbank FICOs reached 23 points in October 2023. The difference between the median FICO on bank and non-bank GSE loans stood at 3 points in October 2023. But across Ginnie Mae loans, the gap currently sits at 14 points.

Agency FICO: Bank vs. Nonbank

GSE FICO: Bank vs. Nonbank

Ginnie Mae FICO: Bank vs. Nonbank

Sources: eMBS and Urban Institute.
Nonbanks are more expansive in their lending than their bank counterparts, as indicated by higher back-end DTIs in both GSE and Ginnie Mae markets. From early 2017 to early 2019, there was a sustained increase in DTIs, which has reversed beginning in the spring of 2019. This is true for both Ginnie Mae and the GSEs, for banks and nonbanks. As interest rates in 2018 increased, DTIs rose, because borrower payments were driven up relative to incomes. As rates fell during most of 2019 and 2020, DTIs fell as borrower payments declined relative to incomes. Since March 2021, DTIs have increased, reflecting the rise in rates and elevated house price increases, both of which force households to borrow more in relation to income.
Across all channels, the share of purchase lending to applicants of color reached a peak of 32.3% in 2006. Following the Great Recession and amidst a period of very tight credit, the share of purchase loans extended to borrowers of color declined to a low of 21.7% in 2013. Since then, it has slowly recovered. In 2022, the borrower of color share stood at 33.1% in 2022, up from 31.8% in 2021. But the share of purchase lending to borrowers of color varied widely by channel in 2022. At 49.6 percent and 43.1 percent, respectively, borrowers of color accounted for a larger share of FHA and PLS purchase lending. Borrowers of color represented a smaller loans share in the GSE, Portfolio and VA channels, 29.4 percent, 31.4 percent and 32.9 percent, respectively.

STATE OF THE MARKET
MORTGAGE ORIGINATION PROJECTIONS

For the full year of 2023, both Fannie Mae and Mortgage Bankers’ Association expect total origination volume to be below its level in 2022 continuing the decrease from the recent peak established in 2021. The lower full year projections of mortgage originations in 2023 is primarily due to the expectation that the refi share will also be lower. Another contributing factor, as illustrated on page 21, is an expectation of fewer home sales in 2023 relative to 2022. However, expectations for originations over full year 2024 are expected to exceed their 2023 level but are not projected to return to 2022 levels.

Sources: Fannie Mae, Mortgage Bankers Association and Urban Institute. Fannie Mae, as of October 2023.
Note: Shaded boxes indicate forecasted figures. All figures are estimates for total single-family (1-4 unit) market. Regarding interest rates, the yearly averages for 2017, 2018, 2019, 2020, 2021, and 2022 were 4.0, 4.6, 3.9, 3.0, 3.0, and 5.3 percent.

Originator Profitability and Unmeasured Costs

In August 2023, Originator Profitability and Unmeasured Costs (OPUC) stood at $2.98 per $100 loan, down from $3.54 per $100 loan in July 2023. Higher profitability seen in 2020 and early 2021 reflected lender capacity constraints amidst strong refi demand. Reduced profitability in 2022 reflected slower refinance activity, forcing originators to compete more aggressively on price. OPUC, formulated and calculated by the Federal Reserve Bank of New York, is a good relative measure of originator profitability. OPUC uses the sales price of a mortgage in the secondary market (less par) and adds two sources of profitability; retained servicing (both base and excess servicing, net of g-fees), and points paid by the borrower. As volumes decline, fixed costs are spread out over fewer loans, overstating the relative profitability. OPUC is generally high when interest rates are low, as originators are capacity constrained due to refinance demand and have no incentive to reduce rates. Conversely, when interest rates are higher and refi activity low, competition forces originators to lower rates, driving profitability down. While higher rates are limiting volume, originators are adapting to the new environment by slashing head counts and fixed costs.

Note: OPUC is a is a monthly (4-week moving) average as discussed in Fuster et al. (2013).
STATE OF THE MARKET
HOUSING SUPPLY

Months’ supply of existing homes, or the inventory of homes as a share of home sales, remains low, although higher than the record low levels seen in 2021. Despite some fluctuation, existing months’ supply increased over much of 2022 and 2023. However, over this period, existing inventory has increased by 3.8 percent while existing home sales have declined by 40.2 percent. Fannie Mae, the MBA, and the NAHB expect that housing starts over full year 2023 will lag its level in 2022. Amid the lack of inventory, and reduced affordability, industry forecasters project fewer home sales over 2023 as well. Over 2024, industry forecasters expect housing starts to be lower than in 2023 but home sales forecasts are mixed. Both MBA and NAHB expect full year 2024 sales to exceed their 2023 level while Fannie anticipates fewer home sales on average over 2024 compared to 2023.

Note: Shaded boxes indicate forecasted figures; column labels indicate source of estimate.
*The NAHB home sales also excludes existing condos and co-ops reported by NAR.
New residential production, including single-family and multifamily completions as well as manufactured housing shipments, reached a seasonally adjusted annual rate of 1,549 thousand units in September 2023, very similar to its level in September 2022, 1,548 thousand units. Since reaching a low of 565 thousand units in January 2011, new production has risen by 174 percent. However, current production is still 35 percent lower than the peak March 2006 level of 2,380 thousand units. In September 2023, single-family completions and manufactured housing shipments are 48 and 41 percent lower than their respective 2006 peaks. Multifamily completions are 20 percent greater than their 2006 peak of 379 thousand units. Only 4.8 percent of multifamily units completed in 2023 Q2 were for-sale, down significantly from its 2007 Q2 peak of 43.9 percent. Among single-family completions, 70.6 percent were built for-sale in 2023 Q2, 6.0 percentage points lower than the share built for sale in 2022 Q2. The owner-occupied share of mobile homes fell from 2006 to 2014, but partially recovered in the ensuing years.
National Mortgage Affordability Over Time

Mortgage affordability improved again marginally in October after hitting peak marks over the summer. As of October 2023, with a 20 percent down payment, the share of median income needed for the monthly mortgage payment stood at 33.7 percent, higher than the 30.9 percent at the peak of the housing bubble in November 2005; and with 3.5 percent down the housing cost burden is 39.2 percent, also above the 35.8 percent prior peak in November 2005. While affordability looked to have had improved in September, the changes were not long-lasting, as rates shot up again in October. As shown in the bottom picture, even amid seasonality, active listings have largely declined over time and the distribution has shifted markedly towards higher priced homes.

Active Listings by Price Tier Over Time

**Note:** Mortgage affordability is the share of median family income devoted to the monthly principal, interest, taxes, and insurance payment required to buy the median home at the Freddie Mac prevailing rate for a 30-year fixed-rate mortgage and property tax and insurance at 1.75 percent of the housing value. Data for the bottom chart provided by Realtor.com as of October 2023.
According to Black Knight’s repeat sales index, year-over-year home price appreciation was 4.59 percent in October 2023, up from the previous month’s 4.19 percent, indicating that home prices have bottomed and are now rising, even accelerating. Year-over-year home price appreciation as measured by Zillow’s hedonic home value index is similarly increasing and stands at 1.75 percent in September 2023, up from 1.13 percent in September. Home price appreciation is slower relative to March 2022; that may have modestly improved affordability. However, affordability remains low amid the broader increase in home prices combined with a sharp rise in interest rates since 2022.

House price growth accelerated in the second half of 2020 into 2022 across all price tiers. With higher-priced homes experiencing steeper appreciation in 2020 and 2021, year-over-year growth in the highest-tier had surpassed the middle and lowest tiers by Feb 2022. With rates rising sharply in 2022, the rate of appreciation slowed, then dropped for all price tiers. After bottoming at the end of Q1 2023, home prices began to rise. As of October 2023, year-over-year house price appreciation is now positive and increasing at each tier. The greatest appreciation is at the lowest end of the market at 6.49 percent. Appreciation at the highest tier, which had been lowest since July 2022 has now surpassed appreciation of middle tier homes which now stand at 4.84 and 3.93 percent, respectively.

Sources: Black Knight, Zillow, and Urban Institute.
Note: Black Knight modified the methodology behind their HPI in February 2021, resulting in changes to historic price estimates. Data as of October 2023.
In October 2023, house prices in all regions of the country were higher than their level 12 months ago. The Northeast has the highest appreciation at 8.1 percent, followed closely by the Midwest at 7.4 percent. After lagging the rest of the US since July 2022, the West now has higher appreciation than the South at 3.6 and 2.9 percent, respectively. From 2020 to the first quarter of 2021, home prices rose sharply, led by the South and West. From Q2, 2022 to Q1, 2023, home prices fell for most of the country, with the most dramatic drops in the South and West. While house price performance across the South is traditionally not an outlier region compared to the other three regions of the country, house prices across the West are historically more volatile.

Year over Year House Price Appreciation by Region

Source: Black Knight and Urban Institute Calculations.

Note: Data as of October 2023
In the third quarter of 2023, the homeownership rate was at 66.0 percent, close to the rate in the second quarter of 2023, 65.9 percent, and equal to the rate in the third quarter of 2022. After falling to 62.9 percent in the second quarter of 2016, the homeownership rate has begun to recover, but remains 3.0 percentage points below its first quarter of 2005 peak of 69.0 percent. By age groups, senior households are more likely to be homeowners relative to younger households. In addition, the homeownership rate for households 65 years old and above is closest to its 2000s peak levels. By race and ethnicity, white households are more likely to be homeowners relative to households of color. However, the homeownership rate among Hispanic households is closest to returning to its 2000s peak.

Note: Data from 2020 and 2021 is poor due to low response rates during the pandemic.
First-Time Homebuyer Share

In August 2023, the FTHB share for FHA, which has always been more focused on first time homebuyers, was 81.9 percent. The FTHB share of GSE lending in September was 50.5 percent; the VA share was 49.7 percent. The bottom table shows that based on mortgages originated in September 2023, the average FTHB was more likely than an average repeat buyer to take out a smaller loan, have a lower credit score, and have a higher LTV.

Sources: eMBS, Federal Housing Administration (FHA), and Urban Institute.
Note: All series measure the first-time homebuyer share of purchase loans for principal residences.

Note: Based on owner-occupied purchase mortgages originated in September 2023.
The share of loans in and near negative equity decreased slightly from 2.5 percent in Q1 2023 to 2.3 percent in Q2. In Q2 2023, the composition of loans in or near negative equity consists of approximately 2.0 percent with negative equity, and 0.3 percent between zero and 5 percent equity. The share of loans that are 90 days or more delinquent or in foreclosure decreased by 13 basis points, from 1.60 percent in Q2 2023 to 1.47 percent in Q3 2023 reflecting a decrease in the share of mortgages 90 or more days delinquent as the foreclosure rate has stabilized. This number includes loans where borrowers have missed their payments, including loans in COVID-19 forbearance. The bottom chart shows the share of loans in forbearance according to the MBA Weekly Forbearance and Call Volume Survey, launched in March 2020. After peaking at 8.55 percent in early June 2020, the total forbearance rate declined to 2.06 percent as of October 31st, 2021, the final week of the call survey. The MBA has since moved to conducting a monthly survey with the most recent forbearance rate decreasing 2 basis points to 0.29 percent as of October 31, 2023. GSE loans have consistently had the lowest forbearance rates, standing at 0.18 percent at the end of October. The most recent forbearance rate for Other (e.g., portfolio and PLS) loans was 0.32 percent; Ginnie Mae loans had the highest forbearance rate at 0.52 percent.
The Fannie Mae and Freddie Mac portfolios remain well below the $225 billion cap mandated in January 2021 by the new Preferred Stock Purchase Agreements (PSPAs). From September 2022 to September 2023, the Fannie and Freddie portfolios expanded by 9.5 and 6.7 percent, respectively. Within the portfolio, Fannie Mae contracted their less-liquid assets (mortgage loans, non-agency MBS), by 2.7 percent and Freddie Mac increased their less-liquid assets by 10.0 percent, over the same 12-month period.

**Fannie Mae Mortgage-Related Investment Portfolio Composition**

- Current size: $76.0 billion
- 2021 PSPA cap: $225 billion
- Growth year-over-year: 9.5 percent
- Shrinkage in less-liquid assets year-over-year: 2.7 percent

**Freddie Mac Mortgage-Related Investment Portfolio Composition**

- Current size: $85.1 billion
- 2021 PSPA cap: $225 billion
- Growth year-over-year: 6.7 percent
- Growth in less-liquid assets year-over-year: 10.0 percent

**Note:** Effective March 2021, Freddie Mac doesn’t provide FHLMC/non-FHLMC breakout of agency MBS. The above charts were updated in May 2021 to reflect this.
GSES UNDER CONSERVATORSHIP

EFFECTIVE GUARANTEE FEES

Guarantee Fees Charged on New Acquisitions

Fannie Mae’s average g-fees charged on new acquisitions increased from 62.1 basis points in Q2 2023 to 64.3 basis points in Q3 2023. Freddie’s decreased from 67.0 basis points in Q2 2023 to 65.0 basis points in Q3 2023. Fannie Mae and Freddie Mac’s average g-fees charged have largely converged since the first quarter of 2020, but widened to 4.9 basis points in Q2. The gap has since converged again to 0.7 basis points in Q3 2023. However, today’s g-fees are markedly higher than g-fee levels in 2011 and 2012, contributing to the GSEs’ earnings amid sharp drops in acquisition volume. The bottom table shows Fannie Mae LLPAs, which are expressed as upfront charges. In October 2022, the GSEs announced the elimination of LLPAs for loans to FTHB’s earning up to the AMI, affordable mortgage products such as Home Possible and Home Ready, and for loans supporting the Duty to Serve program. In January 2023, the GSEs released an updated LLPA Adjustment Matrix, effective May 1, 2023.

GSEs Under Conservatorship

Fannie Mae and Freddie Mac have been laying off back-end credit risk through CAS/STACR and reinsurance transactions and front-end risk via originators, reinsurers and mortgage insurers. Since 2014, the GSEs have transferred the majority of their credit risk to private markets. Fannie Mae’s CAS issuances since inception total $2.20 trillion; Freddie’s STACR totals $2.71 trillion. After the COVID-19 spread widening in March 2020, and the re-proposed capital rules released by FHFA shortly thereafter, Fannie Mae did not issue any deals from Mar 2020 to Sep 2021, while Freddie Mac continued to issue. With the changes in the final Capital Rule more CRT friendly, and more positive attitude toward CRT at FHFA, Fannie resumed CAS issuance in October 2021. As originations are more limited in 2023, CRT volume is substantially lower than in prior years.

Sources: Fannie Mae, Freddie Mac and Urban Institute. Note: Classes A-H, M-1H, M-2H, and B-H are reference tranches only. These classes are not issued or sold. The risk is retained by Fannie Mae and Freddie Mac. “CE” = credit enhancement.
The figures below show the spreads on 2018, 2019, 2020, 2021 and 2022 indices, as priced by dealers. Note the substantial spread widening in March 2020. This reflected expectations of higher defaults and potential credit losses owing to COVID-19, as well as forced selling. Since then, spreads have narrowed significantly. Spreads, while volatile, were generally widening from February through November of 2022. This reflects slower prepayment expectations and longer exposure to default risk in the face of higher rates. The widening is more pronounced for 2021 and 2022 indices due to less embedded home price appreciation including recent price declines in some markets and a growing risk of a recession. Spreads have largely declined since late 2022 as mortgage non-performance and the unemployment rate remain low, and home price growth has resumed. Note that the 2020 and 2021 indices are heavily Freddie Mac as Fannie did not issue any new deals from Q2 2020 to Q4 2021.
Serious delinquency rates for single family loans have continued their decline. In September 2023 Fannie Mae and Freddie Mac single-family loans held steady 0.54 percent and 0.55 percent, respectively. Serious delinquency rates for FHA loans, which are higher than those on GSE or VA loans, continued its recent decline from 4.12 percent in July to 3.97 percent in August. In Q3 2023, VA serious delinquency rates declined to 1.99 percent from 2.15 percent in Q2 2023. Note that loans that are in forbearance are counted as delinquent for the purpose of measuring delinquency rates. Fannie and Freddie multifamily delinquencies started leveling off in June 2023. From mid-2022 to September 2023, the GSEs’ serious multifamily delinquency rates have been increasing. Since the pandemic, Fannie Mae’s serious multifamily delinquency rate bottomed in January 2023 at 0.24 percent and is up to 0.54 percent in September. Freddie Mac’s serious delinquency rate bottomed in July 2022 at 0.07 percent and has increased to 0.24 percent in September.

Sources: Fannie Mae, Freddie Mac and Urban Institute.

Note: Multifamily serious delinquency rate is the unpaid balance of loans 60 days or more past due, divided by the total unpaid balance.
Agency gross issuance totaled $865.4 billion over the first nine months of 2023, $541.5 billion by the GSEs and $323.9 billion by Ginnie Mae. These levels are considerably lower than early 2022 issuance activity. Total 2023 net issuance (new securities issued less the decline in outstanding securities due to principal pay-downs or prepayments) also lags 2022 levels. However, Ginnie Mae has been stronger to-date as the $150.0 billion issued through October exceeds the $106.5 billion issued over the same period in 2022.

Sources: eMBS and Urban Institute.  
Note: Dollar amounts are in billions. Data as of October 2023.
While FHA, VA and GSE lending have dominated the mortgage market since the 2008 housing crisis, there has been a change in the mix. The Ginnie Mae share of new issuances has risen from a pre-crisis level of 10-12 percent to 34.8 percent in February 2020, reflecting gains in both purchase and refinance shares. The Ginnie share then declined to a low of 20.4 percent in November 2020, reflecting the more robust ramp up in GSE refinances relative to Ginnie Mae refinances. The Ginnie share increased in recent months while refines were low reaching a high of 40.8 percent in November 2022. While broadly lower over 2023, the Ginnie share increased marginally from 37.0 percent in September 2023 to 37.7 percent in October and remains high by historical standards.

Fed Absorption of Agency Gross Issuance

In the October 2023, agency MBS on the Federal Reserve’s balance sheet totals $2.5 trillion, down from $2.70 trillion in October 2022. The Fed’s purchases of agency MBS dropped to $0 in November 2022 and has remained negligible since, reflecting their policy of allowing paydowns up to $35 billion to run off. Beginning in June 2022, the Fed allowed up to $17.5 billion to run off each month; the cap on runoffs increased to $35 billion per month in September 2022. The Federal Reserve’s portfolio was a critical policy tool during the pandemic. In March of 2020, the Fed announced they would buy mortgages in an amount necessary to support smooth functioning markets; March and April of 2020 were the largest two months of mortgage purchases ever and exceeded total issuance. Once the market stabilized, the Fed began to purchase $40 billion net of MBS each month; this buying plus runoff replacements equated to purchases of $100 to $125 billion per month. In November 2021, the Fed began to reduce purchases, with these purchases ending in March 2022.

MI Activity

Total mortgage insurance written increased marginally by $4.5 billion to $180 billion from Q2 to Q3 of 2023. However, there was a shift in the mix; FHA and VA whose insurance activity increased by $6.0 and $2 billion, respectively, while private insurance activity decreased by $3.5 billion. The private mortgage insurers share decreased from 46.6 to 43.5 percent. FHA’s share increased from 32.0 to 34.6 percent and VA’s share increased marginally from 21.4 to 21.9 percent.

MI Market Share

MORTGAGE INSURANCE ACTIVITY

FHA premiums rose significantly in the years following the housing crash, with annual premiums rising from 50 to 135 basis points between 2008 to 2013 as FHA worked to shore up its finances. In January 2015, President Obama announced a 50 basis points cut in annual insurance premiums. In February 2023, Vice President Harris announced another 30 basis points cut to FHA insurance premiums, making FHA mortgages more attractive than GSE mortgages for the overwhelming majority of borrowers putting down less than 5%. As shown in the bottom table, a borrower putting 3.5 percent down with a FICO score less than 760 will currently find FHA financing to be more financially attractive, borrowers with FICOs of 760 and above will find GSE execution with PMI to be more attractive. This calculation reflects both the FHA MIP cut and the more favorable GSE LLPAs for LMI borrowers.

**Sources:** Ginnie Mae and Urban Institute.

**Note:** A typical purchase loan has an LTV over 95 and a loan term longer than 15 years. Mortgage insurance premiums are listed in basis points.

* For a short period in 2008 the FHA used a risk based FICO/LTV matrix for MI.

* Applies to purchase loans less than or equal to $625,500. Those over that amount have an annual premium of 150 bps.

* Applies to purchase loans less than or equal to $625,500. Those over that amount have an annual premium of 155 bps.

* Applies to purchase loans less than or equal to $625,500. Those over that amount have an annual premium of 105 bps.

Acknowledgments

The Housing Finance Policy Center (HFPC) was launched with generous support at the leadership level from the Citi Foundation and John D. and Catherine T. MacArthur Foundation. Additional support was provided by The Ford Foundation and The Open Society Foundations.

Ongoing support for HFPC is also provided by the Housing Finance Innovation Forum, a group of organizations and individuals that support high-quality independent research that informs evidence-based policy development. Funds raised through the Forum provide flexible resources, allowing HFPC to anticipate and respond to emerging policy issues with timely analysis. This funding supports HFPC’s research, outreach and engagement, and general operating activities.

The chartbook is funded by these combined sources. We are grateful to them and to all our funders, who make it possible for Urban to advance its mission.
