

Pennsylvania's Children of Immigrants

Dulce Gonzalez and Hamutal Bernstein

In 2023–24, one in four children in the US (26 percent) and nearly one in six children in Pennsylvania (16 percent) had one or more immigrant parents or were immigrants themselves. These children are poised to be key members of Pennsylvania's workforce and taxpayer base, and understanding their characteristics can inform state and local efforts to support communities at a time of significant policy change and difficulty for many working families, and as many immigrant families with children face increased [stress](#) and [disruptions](#) to education and other [activities](#) essential to children's health, family employment, and community participation.

PENNSYLVANIA IS HOME TO 416,000 CHILDREN OF IMMIGRANTS

In Pennsylvania, 34 percent of children of immigrants are Hispanic and 23 percent are Asian. Most children of immigrants in the state (87 percent) are US citizens. Most children of immigrants and their families are firmly rooted in the US: of the 416,000 children of immigrants in Pennsylvania, the majority (66 percent) have one or more immigrant parents who have been in the US at least 10 years (figure 1). Children of immigrants in Pennsylvania make up 16 percent of children ages 0 to 3 and 17 percent of those ages 4 to 5 (figure 2).

FIGURE 1

Children of Immigrants in Pennsylvania Are Mostly Children of Color and US Citizens, and Most Are in Families That Have Been in the US for Over a Decade

URBAN INSTITUTE

Source: Authors' analysis of pooled estimates from the 2023–24 American Community Survey.

Notes: Children who are Asian, Black, white, or some other race or multiracial are not Hispanic. Estimates may not sum to 100 percent because of rounding. For two-immigrant-parent families, "amount of time parent(s) have lived in the US" reflects the parent who immigrated most recently.

DISRUPTING IMMIGRANT FAMILIES' LIVES COULD WORSEN ECONOMIC STRAIN

Most children of immigrants in Pennsylvania are in two-parent families, meaning they may be able to rely on resources such as multiple incomes and caregivers. Three-quarters are in families with two or more children. And nearly two-thirds are in households that own their home (figure 3).

FIGURE 3

Most Children of Immigrants in Pennsylvania Are in Working Households with Two-Parent Families

URBAN INSTITUTE

Source: Authors' analysis of pooled estimates from the 2023–24 American Community Survey.

Notes: Substantial work hours means all adults in the family worked 1,000 hours or more on average, or 1,800 hours or more combined, in the prior year.

Most children of immigrants are US citizens and eligible for public benefit programs on the same basis as children in US-born families. Yet [immigration-related concerns](#) can discourage many eligible families from participating in safety net programs, even when they face significant material hardship and a challenging economic climate that affects all families. In Pennsylvania, 41 percent of children of immigrants are in families with incomes below 200 percent of the federal poverty level (\$62,400 for a family of four in 2024), even though 90 percent are in families with substantial work hours.

ABOUT THE DATA

This fact sheet draws on data from the Urban Institute's Children of Immigrants map feature, available at <https://apps.urban.org/features/children-of-immigrants/>. The data come from pooled estimates for 2023 and 2024 from the American Community Survey. These data were first published in 2016 and have been updated annually since. For more information about the data, see our technical appendix at <https://www.urban.org/research/publication/state-by-state-look-children-immigrants>.

This research is funded by the Annie E. Casey Foundation. The authors thank Gina Adams, David Kallick, and Suma Setty for their review.
