Tracking the Credit Health of New Orleans Residents

How can city leaders support an inclusive recovery and help residents build financial health?
About This Resource

This resource is designed to help local leaders assess the state of their residents’ financial health and identify priorities to advance an inclusive recovery. The chart deck is organized into three sections:

1. The link between financial health and inclusive recovery;

2. Key credit health indicators of New Orleans residents from the Great Recession through the COVID-19 pandemic; and

3. Policy priorities to stabilize resident financial health and advance an inclusive recovery.
Financial health reflects residents’ ability to manage their daily finances, be resilient to economic shocks, and pursue opportunities for upward mobility. Credit health is an important component of overall financial health, in addition to savings, income, and wealth. During economic crises, financially healthy residents can better weather the storm, help stabilize city finances, and contribute to economic recovery. But financial health, like economic recovery, is unevenly distributed across racial and economic groups. And advancing inclusion through financial health requires intentional policies and actions.

An inclusive recovery occurs when a place overcomes economic distress in a way that provides opportunity for all residents—especially historically excluded groups of people—to benefit from and contribute to economic prosperity. To achieve this, an inclusive city must provide a platform of opportunity for all residents while ensuring its residents are financially secure enough to take advantage of that opportunity.

In New Orleans, racial and economic inclusion is an area for growth. New Orleans ranks 266th out of the 274 largest cities nationwide along key measures of economic inclusion and 192nd along key measures of racial inclusion. New Orleans has seen increases in economic health but reductions in overall inclusion over the past couple years.
Key Takeaways

▪ Credit health among New Orleans residents—measured by changes in credit scores, credit use, and delinquencies—improved after the Great Recession and into the COVID-19 pandemic as of October 2020. These trends suggest choices by federal, state, and local policymakers and private-sector partners to help families weather the impacts of COVID-19 are making a difference in their credit health.

▪ Disparities by race illustrate that the last economic recovery failed to adequately address systemic barriers facing families of color. The share of New Orleans residents in communities of color with subprime credit scores (42.1 percent) is nearly 2.5 times higher than in majority-white communities in the city (17.4 percent). Without sustained support and intentional policies that address racial barriers, the economic impacts of COVID-19 could create major setbacks on the pathway to inclusive economic recovery.

▪ Credit health is one component of financial health; while credit measures improved, other data point to increased food insecurity, employment income loss, and other hardships, indicating an uneven recovery. Credit data cannot capture the experiences of about one in ten US adults who do not have a credit file, and people of color are disproportionately represented in this group. Credit data also do not reflect residents’ ability to make timely payments once loan forbearance and other protections end, since reporting requirements make qualifying loans that were current before borrowers sought accommodations appear current during forbearance. Even residents with strong credit health may face challenges if underlying financial circumstances—income and savings—have not improved. Assessing the state of resident’s incomes, savings, and other assets will be important for understanding the full impact of COVID-19 on financial health.
The State of Financial Health in New Orleans

Pre-COVID-19

New Orleans is a city facing challenges to economic stability. Similar to Baton Rouge, Jackson, and Birmingham, New Orleans is struggling economically, with financial health below average. Median credit scores tend to be nonprime, and high shares of residents have delinquent debt, which can limit access to credit.

Relatively high shares of residents in New Orleans do not have a bank account. Residents without a bank or credit union account may have a harder time paying bills, saving, accessing credit, investing in a home, or starting a business.

Among families in New Orleans, 65 percent (approximately 101,000 families) were financially insecure in 2019, with less than $2,000 in savings, compared with 52 percent nationally. This directly affects the city’s financial health. In New Orleans, the estimated government cost of family financial insecurity from eviction and unpaid property taxes and utility bills is $13 million to $30 million out of a total annual budget of $1.1 billion.
The Threat of COVID-19 for Resident Financial Health

America’s cities are showing the economic impact of the COVID-19 pandemic. In New Orleans, the unemployment rate went from 4.2 percent in February to 22.2 percent in April. As of October, New Orleans's unemployment rate was 15.1 percent—more than 10 percentage points worse than pre-pandemic levels. Small business revenue is down 62 percent, and the metro area has lost nearly 17,000 low-wage jobs since the beginning of the pandemic, nearly half of which were in accommodation and food services. When compared to Louisiana at-large, unemployment impacts from the pandemic were worse in New Orleans, in part because of industry composition.

These sudden income drops from job losses, reduced hours, or lost business revenue put financial strain on families, many of whom have limited savings to buffer against such shocks. Further, before the pandemic, New Orleans’ residents already faced challenges to economic stability relative to other cities, with median credit scores that were nonprime. Credit scores that are below prime can limit access to loans and credit cards, making it difficult to weather financial emergencies or invest in the future.
The Additional Threat of COVID-19 for Communities of Color

Households of color have been disproportionately affected by the health and economic consequences of the COVID-19 pandemic. They are more likely to die from COVID-19, more likely to be in essential jobs with outsized exposure to the virus, and more likely to be in low-wage jobs impacted by layoffs.

These disparities are not the result of individual failings but of systemic inequities that produce disparate outcomes by race. Families of color experience greater financial insecurity because of long histories of employment discrimination that hindered pay, housing discrimination that limited wealth building, and residential segregation that slowed mobility. They have less wealth and savings, less access to credit, and more expensive credit than their white peers. Residents in majority-Black, -Hispanic, and -Native communities also experience higher delinquencies and are more likely to use alternative financing services. All these factors contribute to their increased vulnerability to the health and economic shocks of the COVID-19 pandemic and recession.
Resident Credit Health in New Orleans Improved after the Great Recession and into COVID-19

This section shows key credit metrics for New Orleans—credit scores, credit use, and delinquent debt—and breaks out delinquencies by debt type. Federally backed mortgages and student loans received especially strong protections from federal policies during the 2020 economic recession. State and local leaders also have leverage in key markets, given their major role in public higher education systems, oversight of financial institutions, and workforce and economic development partnerships.

Where possible, data show metrics for three groups—all communities, communities of color, and majority-white communities—to highlight the need for policies and strategies that include and empower residents of color. Our city-level data are insufficient to break down communities into more defined racial and ethnic groups, and, sometimes, to perform any demographic analysis. We recognize that financial health data aggregated by racial and ethnic groups often mask tremendous differences within groups.

New Orleans is less financially healthy than other cities, as comparisons with Louisiana and US show. Just under half (44.7 percent) of New Orleans residents have debt in collections. Slightly fewer than 1 in 10 (7.6 percent) New Orleans residents use high-cost alternative financial service loans, and nearly 1 in 5 (19.77 percent) of those loans are 30 or more days past due.

While credit health has improved for all racial groups since the August 2010 across many metrics that follow, the racial gaps that remain indicate that “a rising tide” is not enough. Further, while the following charts show recent improvement across many measures, those improvements reflect government choices to help families weather the financial impacts of COVID-19. Without sustained support and intentional policies that address racial barriers, the economic impacts of COVID-19 could result in a major setback for resident financial health, further exacerbating the fiscal crunch of state and local governments and slowing the pathway to an inclusive economic recovery.
Indicators of the Credit Health of City Residents

*Three ways to characterize credit health using credit data:*

1) **Credit scores** are a composite indicator of overall financial health. Having a subprime credit score can limit access to credit and increase the cost of debt.
   - Scores range from 300 to 850; a score below 600 is subprime.

2) **Credit use** indicates access to credit, which families may use to meet their financial needs. The share of available credit used is a measure of debt burden. Higher debt burdens could signal financial distress.
   - Use of alternative financial service loans like payday loans can indicate emergency needs.

3) **Delinquent debt** data can show where support is needed to avoid foreclosures, bankruptcies, calls from debt collectors, and other hardships. Delinquent debt appears on credit reports, which are sometimes used by employers and landlords to assess job and rental applicants.
   - Delinquent debt is debt that is 30, 60, or more days past due or in collections.
Like in most cities, resident financial health in New Orleans varies by neighborhood. City leaders in government, business, philanthropy, and advocacy can examine differences in delinquencies, credit scores, and credit use to understand how to build a more inclusive recovery, including the targeting of important policies, practices, and resources:

- Community and economic development resources to encourage equitable job and business opportunities
- Location of community services, including banks and financial empowerment centers, to help residents access affordable financial services, build savings, and improve financial resilience
- Design and enforcement of consumer financial protections against predatory lending and unfair debt collection practices
Credit Scores
Credit Health Affects Residents’ Costs of Living

Having a subprime credit score increases the costs of common consumer purchases

Nationally and in Louisiana, the **share of residents with a subprime credit score** steadily declined after the Great Recession and into the pandemic, but racial disparities persisted.

![Graphs showing credit score trends by race and region](image)

Source: Tabulations of Urban Institute credit bureau data.

**Notes:** Subprime credit score is a VantageScore of 600 or below. Demographic estimates are based on zip codes where at least 60 percent of the population identifies as the given race or ethnicity. Because of limited sample sizes, state-level demographic estimates are not always available for all timespans and/or races or ethnicities.
The share of New Orleans residents with subprime credit scores declined from 47.5 percent in August 2010 to 36.1 percent in October 2020.

This trend follows a similar path to Louisiana and the United States overall, though the share of New Orleans residents with subprime credit scores is higher than the statewide and national shares.

Credit scores reflect and perpetuate racial disparities. The share of residents in communities of color with subprime credit scores (42.1 percent) is nearly 2.5 times higher than in majority-white communities in the city (17.4 percent).

Source: Tabulations of Urban Institute credit bureau data.

Notes: Subprime credit score is defined as a VantageScore of 600 or below. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
Credit Use
The share of residents using alternative financial service credit, such as payday loans, increased slightly since February 2020.

Source: Tabulations of Urban Institute credit bureau and alternative financial service data.

Notes: Alternative financial service credit includes short-term loans (installment loans, nonprime credit cards, auto title loans, rent-to-own) and single-pay credit (pawn shops, payday loans) from non-banking institutions. Demographic estimates are based on zip codes where at least 60 percent of the population identifies as the given race or ethnicity. Because of limited sample sizes, state-level demographic estimates are not always available for all timespans and/or races or ethnicities.
Average credit card utilization in New Orleans rose slightly between August 2010 and February 2020, then steeply declined in the first months of the pandemic.

Utilization fell from 36.9 percent in August 2019 to 30.5 percent in October 2020.

Average credit card utilization is higher in New Orleans than in Louisiana and the US overall.

Source: Tabulations of Urban Institute credit bureau data.

Notes: Average credit card utilization is the average percentage of available credit card limit used. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
The share of residents using credit from alternative financial services since the start of the COVID-19 pandemic has remained around 7.5 percent in New Orleans.

Alternative financial service loan use is higher than in Louisiana and the US as a whole.

AFS loan use is about three times higher in communities of color than it is in majority-white communities in New Orleans (9.5 percent compared to 3.4 percent).

Source: Tabulations of Urban Institute credit bureau data.

Notes: Alternative finance products include short-term loans (installment loans, nonprime credit cards, auto title loans, rent-to-own) and single-pay credit (pawn shops, payday loans). Loan origination channels could be online or storefront. Loan types could be installment or single pay.
Delinquent Debt
The share of residents with debt in collections also declined after the Great Recession. Nearly 1 in 3 (29.1 percent) US adults with a credit file, and nearly half (41.6 percent) Louisianans, had debt in collections in October 2020. Overall, racial disparities have continued.

**Source:** Tabulations of Urban Institute credit bureau data.

**Notes:** Share with any debt in collections is the share of people with a credit bureau record who have any debt in collections. Demographic estimates are based on zip codes where at least 60 percent of the population identifies as the given race or ethnicity. Because of limited sample sizes, state-level demographic estimates are not always available for all timespans and/or races or ethnicities.
44.5 percent of New Orleanian adults with credit files had debt in collections in October 2020.

This number is down from 55 percent in 2010 and has continued a downward trend despite the spread of COVID-19 in the US.

The share of New Orleanians with debt in collections is higher than the share of adults with debt in collections in Louisiana (41.6 percent) and the US overall (29.1 percent).

New Orleans residents living in communities of color are more than twice as likely to have debt in collections as residents living in majority-white communities (51.5 percent compared with 22.5 percent).

Source: Tabulations of Urban Institute credit bureau data.

Notes: Share with any debt in collections is the share of people with a credit bureau record who have any debt in collections. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
The credit card delinquency rate in New Orleans was 5.6 percent in October 2020.

This share is compared with 8.6 percent in August 2018.

There has been a small decrease in the credit card delinquency rate in New Orleans since February 2020.

The credit card delinquency rate in New Orleans is higher than it is in Louisiana (5.5 percent) and the US (4.4 percent).

Data before August 2018 are unavailable.

Source: Tabulations of Urban Institute credit bureau data.

Notes: Credit card debt delinquency rate are the share of people with credit/charge card debt who are 30 or more days delinquent. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
The student loan delinquency rate in New Orleans was 14.8 percent in October 2020.

This rate is down from 22.8 percent in August 2010 and 20.1 percent in February 2020.

Student loan delinquencies are lower in New Orleans than in Louisiana (13.7 percent) but higher than the US overall (11.1 percent).

The CARES Act and executive actions by the Department of Education suspended principal and interest payments on federally held student loans through December 31, 2020. Garnishments of wages, tax refunds, and Social Security benefits on student loans in default were also suspended.

Source: Tabulations of Urban Institute credit bureau data.
Notes: Student loan debt delinquency rate is the share of people with student loans who are 60 or more days delinquent. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
The auto/retail loan delinquency rate in New Orleans was 6.9 percent in October 2020.

This rate is up from 6 percent in August 2010 but down from 8.7 percent in February 2020.

Source: Tabulations of Urban Institute credit bureau data.

Notes: Auto/retail loan delinquency rate is the share of people with an auto loan or lease or a retail installment loan who are 60 or more days delinquent. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
The share of alternative financial services loans 30 or more days past due in New Orleans was 19.8 percent in October 2020.

There were insufficient data to calculate AFS delinquencies in majority-white communities in New Orleans.

Source: Tabulations of Urban Institute credit bureau and alternative financial service data.

Notes: Alternative financial service credit includes short-term loans (installment loans, nonprime credit cards, auto title loans, rent-to-own) and single-pay credit (pawn shops, payday loans) from non-banking institutions. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
Around 2 percent of people with mortgages in New Orleans are 30 or more days past due.

The Biden administration extended the foreclosure moratorium for federal and GSE backed loans through June 30, 2021 and provided additional relief to borrowers through flexible forbearance measures. If a loan was current before the request for forbearance, it is counted as current during the forbearance period.

Qualifying renters are also protected from eviction until March 31, 2021, according to an order from the Centers for Disease Control and Prevention.

Data before August 2018 are unavailable.

Source: Tabulations of Urban Institute credit bureau data.

Notes: Mortgage delinquency rate is the share of people with a mortgage who are 30 or more days delinquent. White communities and communities of color are based on zip codes where most residents (at least 60 percent) are white or most residents (at least 60 percent) are people of color.
What solutions are cities exploring to support resident financial health?

To address the economic and health challenges presented by COVID-19, national, state, and local policymakers—along with businesses, philanthropy, and other partners—responded with policies and services to help families avoid eviction and foreclosure and stay current on bills. Federal policies like the CARES Act provided cash payments to millions of families, expanded unemployment benefits, created forbearance options to affected borrowers, and enacted protections to prevent renters from being evicted from their homes. State and local policymakers and their partners filled gaps and built on federal measures, such as by expanding or extending eviction and foreclosure protections. The policy response may explain why many credit measures sometimes improved, counterintuitively, after February.

This last section explores policies and approaches to building resident financial health, both short-term responses to the emergency created by the COVID-19 pandemic and longer-term solutions supported by research.
Potential Areas of Short-Term Focus for New Orleans

New Orleans leaders can take action to ensure an inclusive recovery from COVID-19 and build a stronger, more equitable economy for its residents. City leaders will need to consider whether temporary measures enacted in response to COVID-19 need to be extended, or if certain groups need additional protections or supports. The table below describes some of the steps New Orleans and Louisiana have already taken to protect financial health during the pandemic, and points to ways to build upon these efforts. This list is not exhaustive and focuses mostly on government actions.

<table>

<th>Existing measures</th>
<th>Possible future measures</th>
</tr>
</thead>
</table>
| Income supports       | • LA HB 70 gives incentives to essential critical infrastructure workers by authorizing the payment of a one-time $250 hazard pay rebate  
                         • City secured $500,000 in funding from Mayors for a Guaranteed Income to support the most vulnerable residents who are struggling to pay their bills  
                         • New Orleans Business Alliance has partnered with the Conrad Hilton Foundation to launch the “Get Shift Done” initiative; the program helps connect out-of-work hospitality workers with $10/hour jobs at food banks and feeding sites  
                         • The New Orleans Business Alliance developed and seeded a grants program for displaced gig workers  
                         • Grants to low-income households that have lost work or had extra medical or childcare expenses because of COVID-19 (Los Angeles)  
                         • Suspend the forfeiture of unemployment benefits during the COVID-19 state of emergency (existing policy in New York City) |
| Small business supports | • The Louisiana Small Business Development Center is offering business consultations featuring guidance, tools, and tips for handling the COVID-19 pandemic  
                         • Louisiana Main Street Recovery Program will provide grants of up to $15,000 for eligible small businesses (50 or fewer employees)  
                         • Deferral of licensing fees (existing policy in San Francisco)  
                         • Prioritization of small business grants to businesses with five or fewer and employees and from areas identified as high risk of displacement/highly disadvantaged (existing policy in Seattle) |
| Debt protection        |                                                                                     | • Cross-departmental reductions in response to the crisis to alleviate the burden of fines, fees, financial penalties, and collections (existing policy in San Francisco)  
                         • Renew moratorium on utility shut-offs (existing policy in Washington, California, DC) |
| Housing stability      | • The City of New Orleans will provide $1.5 million in mortgage assistance to small landlords owning eight or fewer rental units and whose rental income has been impacted by the COVID-19 pandemic  
                         • Limited rental assistance available from New Orleans’ Office of Community Development for tenants who are in imminent danger of being evicted  
                         • Permitting rent payment plans (existing policies in Seattle and Washington, DC) |
Potential Areas of Long-Term Focus for New Orleans

As leaders in New Orleans begin to look beyond relief efforts and into recovery, leaders can also consider the following evidence-based long-term strategies to meet the financial needs of their residents:

▪ Facilitate residents’ access to safe and affordable accounts in a bank or credit union. Residents who do not have bank accounts may be more likely to use high-cost alternative financial products, such as payday loans, and may find it harder to save.

▪ Assess city debt collection practices and provide constructive options for families to repay city debts, such as city-owned utility debts and city-imposed fines or fees. This can be a fruitful way for cities to boost residents’ financial health, as well as their own. Given the high share of residents with delinquent debt, cities can benefit from helping residents restructure their debt payments and connecting them to financial empowerment services.

▪ Provide financial coaching, counseling, and innovative uses of technology to help residents save, manage their debt and daily finances, and build credit scores. Having good credit enhances residents’ ability to borrow, especially at a reasonable price, and could even help them secure a job or a place to live.

▪ Integrate financial and savings interventions into existing programs and platforms (e.g., housing, employment, community colleges, tax preparation, and public utilities) to reach more residents and meet people where they are. This can include elements that help residents manage their debt and daily finances, build credit scores, and save.

▪ Support the future workforce by investing in youth and young adults, including through programs like NOLA Youth Works. This can signal a dedicated investment to improve the economic mobility of residents. As an additional step, youth should be connected with a safe, low-cost account (e.g., bank or Louisiana Federal Credit Union account) for receiving, spending, and saving their earnings.

To meet resident needs with limited resources, local leaders may consider leveraging community partnerships with businesses, nonprofits, and philanthropy; or enacting measures like regulations that don’t require additional spending.
