Assessing  
the New  
Federalism

*An Urban Institute  
Program to Assess  
Changing Social Policies*

## Assessing the New Federalism

*Assessing the New Federalism* is a multiyear Urban Institute project designed to analyze the devolution of responsibility for social programs from the federal government to the states. It focuses primarily on health care, income security, employment and training programs, and social services. Researchers monitor program changes and fiscal developments. Alan Weil is the project director. In collaboration with Child Trends, the project studies changes in family well-being. The project provides timely, nonpartisan information to inform public debate and to help state and local decisionmakers carry out their new responsibilities more effectively.

Key components of the project include a household survey, studies of policies in 13 states and a database with information on all 50 states and the District of Columbia. Publications and database are available free of charge on the Urban Institute's Web site: <http://newfederalism.urban.org/>. This paper is one in a series of papers analyzing information from these and other sources.

The project received funding from The Annie E. Casey Foundation, the W.K. Kellogg Foundation, The Robert Wood Johnson Foundation, The Henry J. Kaiser Family Foundation, The Ford Foundation, The John D. and Catherine T. MacArthur Foundation, the Charles Stewart Mott Foundation, The David and Lucile Packard Foundation, The McKnight Foundation, The Commonwealth Fund, the Stuart Foundation, the Weingart Foundation, The Fund for New Jersey, The Lynde and Harry Bradley Foundation, the Joyce Foundation, and The Rockefeller Foundation.

The nonpartisan Urban Institute publishes studies, reports, and books on timely topics worthy of public consideration. The views expressed are those of the authors and should not be attributed to the Urban Institute, its trustees, its funders, or other authors in the series.

The following set of tabulations presents detailed descriptive information on health insurance coverage, access to care, and health care utilization in Texas and the nation. These tabulations are based on the 1999 National Survey of America's Families (NSAF) and are an update of similar tabulations developed using the 1997 NSAF (the 1997 data are available online at [http://newfederalism.urban.org/pdf/State\\_profile\\_TX.pdf](http://newfederalism.urban.org/pdf/State_profile_TX.pdf))<sup>i</sup>. Although detailed comparisons between 1997 and 1999 are not available in these tabulations, Table A presents an overview of changes in the distribution of health insurance coverage for Texas and the nation as a whole.

**Table A. Health Insurance Coverage of Nonelderly Population by Age, Texas and the U.S., 1997-1999.**

	Texas		U.S.	
	1997	1999	1997	1999
<b>All (0-64)</b>				
Employer-Sponsored	60.3	62.5	69.7	70.5 *
Medicaid/SCHIP/State	9.5	7.9 **	8.8	8.5
Other	5.1	4.6	6.1	5.9
Uninsured	25.1	25.0	15.4	15.1
<b>Children (0-17)</b>				
Employer-Sponsored	54.0	56.7	66.7	66.6
Medicaid/SCHIP/State	20.6	16.9 **	17.4	16.8
Other	4.2	3.4	4.1	4.2
Uninsured	21.2	22.9	11.8	12.3
<b>Adults (18-64)</b>				
Employer-Sponsored	63.4	65.3	71.1	72.2 **
Medicaid/SCHIP/State	4.1	3.6	5.1	4.9
Other	5.6	5.2	6.9	6.6
Uninsured	26.9	25.9	17.0	16.3

**Source:**

Urban Institute tabulations of the National Survey of America's Families (NSAF), 1997 and 1999.

**Notes:**

\* Indicates change from 1997 to 1999 is statistically significant at the 0.10 confidence level.

\*\* Indicates change from 1997 to 1999 is statistically significant at the 0.05 confidence level.

\*\*\* Indicates change from 1997 to 1999 is statistically significant at the 0.01 confidence level.

The remaining tables presented in this State Profile focus only on 1999. Further details on changes by state and nationally between 1997 and 1999 are available in other publications (Kenney, Dubay, and Haley 2000; Zuckerman, Haley, and Holahan 2000).

Tables 1 through 10 present the distribution of insurance coverage (Employer-Sponsored, Medicaid/SCHIP/State, Other Coverage, and Uninsured<sup>ii</sup>) by selected subgroups, including age, family income, gender, race/ethnicity, family structure, family work status, worker's firm size, community type, and country of origin. Table 11 presents characteristics of the uninsured, and Table 12 summarizes estimates of uninsurance rates for each of the subgroups shown in Table 11. Tables 13 and 13a describe characteristics of enrollees in Medicaid, SCHIP, or other state insurance programs, overall and separately for poor and

near-poor enrollees. Tables 14 through 17a present indicators of access to and utilization of health care for children and adults by type of insurance coverage, overall and separately for the low-income population (defined as those with family incomes below 200 percent of the federal poverty level, or \$33,060 for a family of four in 1998).

### ***The National Survey of America's Families***

The NSAF is a household survey conducted as part of the Urban Institute's *Assessing the New Federalism* (ANF) project, which was designed to analyze the devolution of responsibility for social programs from the federal government to the states. The first round of the NSAF was fielded in 1997, the second round was fielded in 1999, and a third round will be fielded in 2002. Along with providing a nationally-representative sample of over 44,000 households in each round, the NSAF has large, state-representative samples in 13 selected states (Alabama, California, Colorado, Florida, Massachusetts, Michigan, Minnesota, Mississippi, New Jersey, New York, Texas, Washington, and Wisconsin) and over-samples the low-income population. Comparable State Profiles for each of these 13 states in 1997 and 1999 are available on the ANF Web site (<http://newfederalism.urban.org>). Extensive information about the survey, including the design features, response rate, weighting procedures, and treatment of nonresponse, is available in a series of online methodology reports (<http://newfederalism.urban.org/nsaf/methodology.html>).

Readers should note that NSAF estimates of the number of uninsured children and non-elderly adults are lower than those based on the Census Bureau's Current Population Survey (CPS). There are many differences between these two surveys, including the surveys' approaches to measuring insurance coverage. First, prior to March 2000, the CPS approach to measuring coverage has been to ask a series of questions about insurance coverage and assume that any person not designated as being covered through any type of health plan is uninsured. NSAF uses a series of questions similar to CPS in wording but added a question that confirms whether people who appear not to have coverage are, in fact, uninsured. A substantial number of respondents used this opportunity to designate a particular type of coverage for those who initially appeared to be uninsured.

For the March 2000 survey, the CPS also added a confirmation question. Revised estimates for 1999 that used information collected through the confirmation question suggested a lower uninsurance rate from the CPS than was originally estimated (Nelson and Mills 2001). A detailed analysis of the implications of the confirmation question in NSAF is available in Rajan, Zuckerman, and Brennan (2000). In addition, CPS measures insurance coverage during the calendar year prior to the survey (which occurs in March), while NSAF measures insurance coverage at the time of the survey. As a result,

the CPS uninsurance rate would not be directly comparable to the statistics reported in these tables.

### **Public use files**

Researchers can access the NSAF data through public use files available on the ANF Web site. Files based on both the 1997 and 1999 rounds of data are available to download. In addition, custom tabulations using either year of data are available using a Windows-based program, the NSAF CrosstabMaker. The CrosstabMaker is easy to use and requires no knowledge of the survey or statistical software packages. These resources are available at no charge to users who register at <http://newfederalism.urban.org/nsaf/cpuf/index.htm>.

---

<sup>i</sup> Note that different categories of insurance coverage are used in the 1997 and 1999 State Profiles. The tabulations using the 1997 NSAF classified coverage into five categories: Employer, Other Private, Medicaid/State, Other Public, or Uninsured. In 1999, coverage was grouped into four slightly different categories: Employer-Sponsored, Medicaid/SCHIP/State, Other, and Uninsured. Thus, direct comparisons within coverage groups between the two rounds of data are not possible using these reports. See notes following the tables for further details on the categorization of insurance coverage.

<sup>ii</sup> To create mutually exclusive coverage categories, people reporting multiple types of insurance coverage are classified according to a hierarchy that looks first for employer coverage and then for Medicaid/SCHIP/State coverage.

Standard errors for each percent are given in parentheses.  
See further notes following last table.

## Notes for Tables 1 - 10

1. Insurance coverage is measured at the time of the survey. Excludes persons ages 65 and over and those living in institutions or group quarters.
2. Employer-Sponsored coverage includes those who receive coverage directly from a current or former employer or union, those who receive coverage as dependents, those who receive coverage under the Consolidated Budget Reconciliation Act of 1986 (COBRA), and those who receive coverage under CHAMPUS, Veterans Affairs (VA), or other military program.
3. Medicaid/SCHIP/State coverage includes those who receive coverage through the Medicaid program, through state-specific programs, or, for children less than 18, through separate State Children's Health Insurance Programs (SCHIP).
4. Other Insurance includes those who receive coverage through Medicare, through privately-purchased coverage that is not obtained through an employer or union, and through coverage that cannot be definitively classified as employer-sponsored, privately-purchased, Medicaid/SCHIP/State, Medicare, or CHAMPUS, Veterans Affairs (VA), or other military program.
5. Uninsured includes those who report no type of health insurance coverage at the time of the survey or who report coverage under the Indian Health Service Program. Rather than defining uninsurance as a residual, the NSAF confirms uninsurance with a question that verifies whether people who appear not to have coverage are, in fact, uninsured (Rajan, Zuckerman, and Brennan 2001).
6. The family structure of adults is defined in terms of whether or not they are married and whether or not they have any of their own children in the household. "Married" adults are defined as those who report being married or have a spouse in the household. Those who are widowed, divorced, separated, or never married, or whose marital status was not ascertained but who did not report having a spouse in the household, are classified as "single." Those "with children" have at least one biological, adoptive, or stepchild under age 18 living in the household at the time of the survey; all other adults are classified as "without children."
7. Family type for children is defined in terms of their relationship with the adults with whom they live. The category "no parents" means that the child lives with relatives other than parents or with unrelated adults. Children classified as living in "one-parent families" live with a single biological or adoptive parent (the household may contain this parent's unmarried partner). Children living with two biological or adoptive parents (married or unmarried) or one biological or adoptive parent and one stepparent (parents must be married) are classified as living in "two-parent families."
8. Family work status is a hierarchy. Individuals who work fewer than 35 hours per week are considered part-time workers, and those who work 35 or more hours per week are considered full-time workers. Families with at least one full-time worker are classified as "full-time worker" families. Families with no full-time workers but one or more part-time workers are classified as "part-time worker(s) only" families, and those with no full-time or part-time workers in the family are classified as "no workers" families.
9. Firm size is the number of people who are employed at the location of the worker's main job. Based on those who work for an employer. "Working for an employer" includes those who are also self-employed part of the time but work for an employer as their main job. Excludes those who work in the public sector.
10. Based on those for whom geographic location is known (county-level information is not available for residents of Alaska). MSAs are Metropolitan Statistical Areas as defined by the U.S. Office of Management and Budget and as used by the U.S. Census Bureau (see <http://www.census.gov/population/www/estimates/aboutmetro.html>).

## Notes for Tables 11 - 13a

11. Insurance coverage is measured at the time of the survey. Interviewers asked respondents about family members' current enrollment in private and public insurance and followed up with a confirmation question when no coverage was specified. Uninsured includes those who reported no type of health insurance coverage at the time of the survey or who reported coverage under the Indian Health Service program. Excludes persons ages 65 and over and those living in institutions or group quarters.
12. Based on those for whom geographic location is known (county-level information is not available for residents of Alaska). MSAs are Metropolitan Statistical Areas as defined by the U.S. Office of Management and Budget and as used by the U.S. Census Bureau (see <http://www.census.gov/population/www/estimates/aboutmetro.html>).
13. For children, indicates that the child has a physical, learning, or mental health condition that limits participation in the usual kinds of activities done by most children the child's age or limits his or her ability to do schoolwork. For adults, indicates a physical, mental, or other health condition that limits the kind or amount of work the person can do.
14. Insurance coverage is measured at the time of the survey. To create mutually exclusive coverage categories, people reporting multiple types of insurance coverage are classified according to a hierarchy that looks first for employer-sponsored coverage and then for Medicaid/SCHIP/State coverage. Thus, for instance, those with both employer-sponsored coverage and Medicaid would be classified as having employer-sponsored coverage and would not be included in these estimates. Medicaid/SCHIP/State coverage includes those who receive coverage through the Medicaid program, through state-specific programs, or, for children less than 18, through separate State Children's Health Insurance Programs (SCHIP). Excludes persons ages 65 and over and those living in institutions or group quarters.

#### **Notes for Tables 14 - 17a**

15. Insurance coverage is measured at the time of the survey. Excludes persons ages 65 and over and those living in institutions or group quarters.
16. Employer-Sponsored/Other Insurance includes those who receive coverage directly from a current or former employer or union, those who receive coverage as dependents, those who receive coverage under the Consolidated Budget Reconciliation Act of 1986 (COBRA), those who receive coverage under CHAMPUS, Veterans Affairs (VA), or other military program, those who receive coverage through Medicare, those who receive coverage through privately-purchased coverage that is not obtained through an employer or union, and those who receive coverage that cannot be definitively classified in any other category.
17. Medicaid/SCHIP/State coverage includes those who receive coverage through the Medicaid program, through state-specific programs, or, for children less than 18, through separate State Children's Health Insurance programs (SCHIP).
18. Uninsured includes those who report no type of health insurance coverage at the time of the survey or who report coverage under the Indian Health Service Program. Rather than defining uninsurance as a residual, the NSAF confirms uninsurance with a question that verifies whether people who appear not to have coverage are, in fact, uninsured (Rajan, Zuckerman, and Brennan 2001).
19. The NSAF asks, "Is there a place where [person] usually goes when he/she is sick or needs advice about his/her health?" If yes, the interviewer asks, "What kind of place is it that [person] usually goes to?" The response choices are a doctor's office (including an HMO), a hospital emergency room, a clinic or hospital outpatient department, or some other place. "Other" includes those whose usual source of care is a clinic or hospital outpatient department, a naturopathic/herbal provider, a family member or friend who is in the medical profession, dial-in or phone service, or other providers.
20. Unmet need estimates are based on responses to a series of questions asking, "In the past 12 months, did [person] not get or postpone [type of care] when he/she needed it?" "Any" unmet

need indicates that a person had one or more types of unmet need among medical/surgical, dental, and prescription drug need.

21. Based on respondent's answer to the question "How confident are you that your family members can get care if they need it?" "Not confident" includes those respondents who say they are "not too confident" or "not confident at all" that their family can get needed medical care.
22. Based on respondent's answer to the question "How satisfied are you with the quality of medical care your family has received during the last 12 months?" "Not satisfied" includes those respondents who say they are "very dissatisfied" or "somewhat dissatisfied" in the quality of care their family receives.
23. "Low-income" is defined as below 200 percent of the federal poverty level.
24. Health service utilization questions in the NSAF ask whether the sampled person received specific types of care in the 12 months prior to the survey and, if so, how many times.
